MONTHLY WEATHER MAP

JULY 1960

LIBRARY
SEP 15 1960
WEATHER BUREAU

General Summary of Weather Conditions

July 1960 was warm and dry in the four western provinces of Canada. Ontario and Quebec had a cool month, with abundant rainfall in some sections. Temperatures were seasonal in the Maritime Provinces with most stations reporting below normal precipitation. June was dry in Newfoundland, temperatures averaging within one degree of normal.

The circulation over Canada in July was characterized by a much stronger than usual upper westerly flow. For the first three weeks of the month the long-wave pattern was marked by a trough off the British Columbia coast, a ridge over western North America and a trough near the Great Lakes. The ridge over Western Canada resulted in warm dry weather while the trough over the Great Lakes, by directing outflows of Arctic air southeastward, resulted in below normal temperatures over Ontario and Quebec.

The northern part of the British Columbia coast experienced frequent storm activity during the month of July. Ethelda Bay in this region reported 8.4 inches, the greatest monthly precipitation total for any station in Western Canada. Over the remainder of the Province of British Columbia monthly precipitation totals ranged from none at all or only traces in the Fraser Delta and Kootenay Valley to about half the normal fall in the northern sections of the province. In between, most stations experienced deficiencies of about 75 per cent.

July was warm in British Columbia, mean temperatures ranging from near normal along the coast to six degree above normal in the interior districts. The greatest positive anomaly, eight degrees above normal, was reported from Old Glory Mountain. A number of stations reported maxima for the month over 100 degrees with the highest in the province occurring at Hedley, where 104 was recorded. At Vancouver Airport the maximum of 87.3 slightly exceeded the old record of 87.0 set in 1942. Another record was broken at Vancouver when the City Office received 388.1 hours of sunshine exceeding the previous record of 381.2 set in 1931.

On the Prairie Provinces, July weather was dry and hot. Mean temperatures ranged from normal to three degrees above normal in Manitoba, three to six degrees above normal in Saskatchewan and most of Alberta. In Alberta's Peace River District there were temperature excesses of about one degree. At Edmonton the mean temperature for the month of 66 equalled that of the warmest month on record, while several dozen stations in southern Saskatchewan and Alberta had monthly extreme temperatures exceeding 100 degrees. Maximum temperature in Canada for July 1960 was 105 degrees at Whitla, Alberta on the 19th.

July was dry on the Prairies with most stations reporting deficiencies. These ranged to 80 per cent in Manitoba and Saskatchewan, to 90 per cent in southern Alberta, and about 60 per cent for the part of the Province of Alberta north of Calgary. Despite the general dryness there were a number of locally heavy rainfalls. On July 18th at Neepawa a thunderstorm of near tornado intensity resulted in the derailing of 50 boxcars on July 18th. On July 19th extensive hail damage was reported in the Red Deer area, with hailstones up to three inches in diameter. The greatest amount of rain to fall in a single storm was noted in the Stony Mountain area on the 24th, when over six inches of rain was recorded.

The month was sunnier than normal throughout the Prairie Provinces and at Winnipeg the 363.3 hours measured during the month was within two hours of the record for July; the record extending back to 1900.

July weather in Ontario was characterized by cool nights and warm comfortable days. Mean temperatures averaged one to three degrees below normal in northern Ontario, and two to five degrees below normal in southern Ontario. Only in southwestern Ontario did the maximum temperature reach the nineties, the highest being 94, reported at Sarnia.

As is to be expected in a summer month, July rainfall was showery in character in the Province of Ontario and its distribution consequently irregular. Precipitation totals for the month were fifty to one hundred per cent above normal in a band extending from Georgian Bay eastward to the Ottawa River. The greatest monthly precipitation in the province was reported at Sudbury which experienced a fall of 7.65 inches during the month. In the remainder of northern Ontario precipitation was generally light, the range being from normal to 50 per cent below normal. In southern Ontario there were generally deficiencies ranging to about 50 per cent but there were a few excesses in the Toronto area where a severe storm on July 9th deposited more than three and a half inches on a small area northwest of the city.

July was a cool month in the Province of Quebec with mean temperatures ranging from two to four degrees below normal throughout most of the province. The only exceptions were along the shores of Hudson Bay and Hudson Strait where a few stations at the head of the Ottawa Valley reporting very large falls for the month. In this area the heaviest precipitation was reported at Grand Lake Victoria where a fall of 10.5 inches was recorded while, on James Bay, Fort George received 11.3 inches during the month. This is the greatest fall reported over the entire country during July 1960. Aside from this area of large falls, the remainder of Quebec experienced a mixture of excesses and deficiencies, generally ranging about 50 per cent on either side of normal.

July weather was seasonable in the Maritime Provinces, with mean temperature remaining within one degree of normal throughout the area. On the 4th and 14th of the month temperatures stayed in the low seventies, but otherwise there were no extended heat or cold waves. Although temperatures frequently rose into the eighties, ninety degree readings were scarce throughout the three provinces.

The precipitation was showery as frequent cold fronts crossed the area but the amount of rain falling on any particular occasion were small, so that, although showers were reported somewhere in the Maritime Provinces on twenty-seven days of the month, mean totals were 20 to 60 per cent below normal in Nova Scotia and the northern half of New Brunswick, and within 50 per cent above or below normal in the southern half of New Brunswick and the Province of Prince Edward Island. Hurricane "Brenda" moved up through Maine on the 30th of the month, but failed to have much influence on the weather of the Maritime Provinces.

On the Island of Newfoundland July mean temperatures ranged from normal to two degrees above normal, while along the Labrador coast there were generally deficiencies of one or two degrees.

Aside from small precipitation excesses at Port aux Basque and Burgeo, rainfall was deficient on the Island of Newfoundland during the month. Deficiencies ranged to almost 80 per cent throughout the Island. At St. John's Airport where the normal rainfall for July is 3.63 inches, a total of only .88 was recorded, which was close to the long-term record low for the month. Along the Labrador coast there were excesses averaging about 50 per cent.

In the Yukon Territory July temperatures were within one degree of normal. Precipitation was about 50 per cent of normal at southern stations in the Yukon, but in the northern section Dawson and Mayo reported excesses, the latter receiving over twice the normal fall.

July mean temperatures were two to three degrees below normal in the Mackenzie Valley but elsewhere in the Northwest Territories mean temperatures ranged from normal to three degrees above normal with the distribution being somewhat irregular. Precipitation for July was generally above normal along the Mackenzie River with a few stations in the Great Slave Lake District receiving more than twice the normal fall. Elsewhere in the District of Mackenzie and throughout the District of Keewatin July precipitation was not far from normal. In the western part of the Islands of the Arctic Archipelago there was generally about twice the normal fall, while on Baffin Island in the eastern part most stations reported deficiencies, the greatest being 70 per cent at Clyde.

JULY 1960
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
